

## Jet Ski

**Project:** Surf Life Saving Club Jet Ski

**Category:** Protection & abrasion resistance

**Completion**

**Date:** November 2006

**Product::** Tuff Stuff

## Job Description

A local Surf Life Saving Club was experiencing problems of wear and impact abrasion on the rear of their Yamaha Jet Ski through the attachment of a rescue board used during surf rescues.

Rhino Linings Tuff Stuff was applied to the rear of the watercraft for its protection properties thereby preventing the problem from reoccurring. This application also has the added advantage as a guard from the corrosive effects of harsh weather, salt and rust.

Continual research and development of our products ensures that Rhino Linings meet the increasing demand for durability and performance, the reason why industry leaders in manufacturing, containment, the military and marine environments choose our products.
